

*Guiding Aircraft Safely and Efficiently on Runways, Taxiways and Aprons Since 1992*

## **Herculens® Sign Panels Perform in the Most Extreme Environments**

**Airfield Guidancesign  
Manufacturers, Inc.**

**AGM's patented Herculens sign panels are the industry's most durable.**

Based on their performance and strength, Herculens panels were approved by the Massachusetts Port Authority, Los Angeles World Airports, the Dallas/Fort Worth Department of Aviation, and other airports around the globe.

### **Application and Environments**

The rugged design of a Herculens panel sheds jet blast and resists snow and ice accumulation without the flimsy plastic internal bracing or an added "performance top" required by standard rounded signs.

Bright and clear, Herculens sign panels are durable and highly impact resistant. They're visually acquired more quickly and are much easier to read.

### **Solid, Hand-Crafted Construction**

More than 50% thicker than others, the panels are CNC-machined and expertly formed for a solid, seamless fit. Herculens panels display messages without distortion and are free of the spaces and joints that can obscure a legend with modular construction.

### **Perfect for Upgrades**

Legacy Lumacurve® signs can be updated to meet FAA performance specifications by replacing OEM panels with AGM Herculens panels. These upgrades have been approved for projects with AIP funding.

### **Performance Proven in the Field**

**Factory-installed  
in AGM's D-Lux  
and D-Lux LED  
rounded signs.**
